X Anopheles gambiae; mosquito; olfactory gene; arrestin 1; pest control; odourant receptor; olfaction. 01-NOV-2002 ABP52833; Zwiebel LJ, 26-JAN-2001; 2001US-0264649P. 24-JAN-2002; 2002US-00056405. 28-JAN-2002; 2002WO-US002549 01-AUG-2002. WO200259274-A2. Anopheles gambiae. Anopheles gambiae arrestin 1 protein SEQ ID NO:2. ABP52833 standard; protein; (UYVA-) UNIV VANDERBILT. (first entry) 383

New mosquito olfaction polypeptides and polynucleotides, useful for mosquito management, i.e. controlling the pest and disease vectors, for identifying pest control agents. or

WPI; 2002-627421/67. N-PSDB; ABQ75102.

Claim 18; Fig 2; 96pp; English.

The present invention describes a purified Anopheles gambiae olfaction polypeptide comprising a 383, 394, 380, 411, 412, 391, 157 or 401 residue amino acid sequence (see ABP52833 to ABP52840) (S1), a conservatively modified amino acid sequence of them, or a sequence of (S1) with at least 20 consecutive residues. Also described: (1) an isolated polynucleotide comprising: (a) a nucleotide sequence encoding the purified Anopheles gambiae olfaction polypeptide; or (b) a nucleotide sequence that hybridises under stringent conditions to a hybridisation probe comprising a 1964, 1239, 1142, 1236, 1194, 1176, 474 or 1206 nucleotide sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                complement; and (2) a method for identifying an agent that binds to mosquito olfaction molecules comprising: (a) providing an isolated mosquito olfaction molecule; (b) contacting a test agent with the jend of the test agent to the isolated mosquito olfaction molecule; and (c) detecting specific binding of the test agent to the isolated mosquito olfaction molecule, where the presence of specific binding identifies the test agent as a mosquito olfaction-binding compound. The mosquito olfaction molecules are useful for mosquito management, i.e. controlling this pest and disease vector. A method from the present invention of screening for substances that modulate arrestin-odourant receptor interaction is useful for identifying pest control agents. The present sequence represents Anopheles gambiae arrestin 1 from the present invention

The invention provides 9 novel mosquito polypeptides and the nucleic acids encoding them. These are arrestins 1 and 2 and odorant receptor molecules 1-7. The odorant receptors function in a ligand-induced signal transduction pathway for the activation of mosquito olfaction. Arrestin functions to inhibit the activated signal transduction cascade. Thus, the odorant receptors act as an 'on' switch, and arrestin as an 'off' switch for the odorant detection system of the mosquito. Methods are provided for identifying compounds that interfere with the operation of the mosquito olfactory system, particularly compounds that modulate arrestin 2 activity. These are useful for the control of mosquitoes, particularly by reducing their ability to locate sources of bloodmeal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New mosquito arrestin 1 and 2 genes and polypeptides, useful for identifying mosquito olfaction molecule binding compounds which reduce the ability of mosquitoes to locate sources of bloodmeal, e.g. humans.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL01676-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

The composition or the polypeptide, polynucleotide or RNA precursor, or antibody is useful for diagnosing, preventing or treating diseases (e.g. cell proliferative diseases such as cancer) in an individual. These may also be used for identifying substances capable of binding to or modulating the function of the polypeptide, capable of affecting the function of the corresponding gene, or capable of affecting the cell division cycle or cell cycle progression, preferably mitosis and/or meiosis. The present sequence represents an antagonist of cell cycle progression protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Arrestin; phosphorylation-independent arrestin mutant; grotein-coupled receptor; GPCR; GPCR ligand; pretinitis pigm stationary night blindness; colour blindness; nephrogenic DI; isolated glucocorticoid deficiency; hyperfunctioning thyroid familial hypocalciuric hypercalcemia; hyperparathyroidism;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New cell cycle progression genes and proteins for modulating cell cycle progression in cells, for preventing, treating or diagnosing cell proliferative diseases (e.g. cancer) or for identifying modulators of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WPI; 2004-544089/52.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence represents an exemplary phosphorylation-independent CC arrestin mutant. Such mutants are used in screening assays to identify CC ligands and/or modulators of G protein-coupled receptors (GPCRs). A CC method for identifying a GPCR ligand comprises contacting a composition CC comprising the GPCR and a constitutively active arrestin mutant with a CC test compound; and determining the ability of the test compound to CC modulate binding of arrestin mutant to the GPCR, where modulation of CC binding indicates that the test compound is a GPCR ligand. The method is CC used for identifying potential ligands and/or modulators of GPCRs, CC particularly modulators, for use as human therapeutics. Modulators of GPCR may be used for treating patients having e.g. retinitis pigmentosa, CC used for the calcenta, hyperfunctioning thyroid adenomas, familial CC hypocalciuric hypercalcenta, hyperfunctioning thyroid adenomas, familial CC disorders. The methods may be used for screening pluralities of test CC compounds (e.g. a small molecule library of compounds) or a composition containing a plurality of GPCRs. The methods may be used in screening CC assays for identification of natural and surrogate agonists of orphan CC GPCRs, and for identification of GPCR antagonists and/or agonists
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            polypeptides and the nucleic acids encoding them. These are arrestins 1 and 2 and odorant receptor molecules 1-7. The odorant receptors function in a ligand-induced signal transduction pathway for the activation of mosquito olfaction. Arrestin functions to inhibit the activated signal transduction cascade. Thus, the odorant receptors act as an 'on' switch, and arrestin as an 'off' switch for the odorant detection system of the mosquito. Methods are provided for identifying compounds that interfere with the operation of the mosquito olfactory system, particularly compounds that modulate arrestin 2 activity. These are useful for the control of mosquitoes, particularly by reducing their ability to locate sources of bloodmeal
                                          The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The inventior useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly that the patent did not format directly are the control of the sequences.

                                                                       The present sequence represents an exemplary phosphorylation-independent cc arrestin mutant. Such mutants are used in screening assays to identify cliptands and/or modulators of G protein-coupled receptors (GPCRs). A cc method for identifying a GPCR ligand comprises contacting a composition cc comprising the GPCR and a constitutively active arrestin mutant with a cc test compound; and determining the ability of the test compound to comodulate binding of arrestin mutant to the GPCR, where modulation of cc binding indicates that the test compound is a GPCR ligand. The method is cused for identifying potential ligands and/or modulators of GPCRs, coparticularly modulators, for use as human therapeutics. Modulators of GPCR may be used for treating patients having e.g. retinitis pigmentosa, cc stationary night blindness, colour blindness, nephrogenic DI, isolated contaction hypercalcemia, hyperfunctioning thyroid adenomas, familial cc disorders. The methods may be used for screening pluralities of test compounds (e.g. a small molecule library of compounds) or a composition containing a plurality of GPCRs. The methods may be used in screening cc assays for identification of natural and surrogate agonists of orphan cc GPCRs, and for identification of GPCR antagonists and/or agonists
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

                                                      CC describes phosphorylation-independent arrestin mutants. These mutants are CC used in screening assays to identify ligands and/or modulators of G CC protein-coupled receptors (GPCRs). A method for identifying a GPCR ligand CC comprises contacting a composition comprising the GPCR and a CC constitutively active arrestin mutant with a test compound; and CC determining the ability of the test compound to modulate binding of CC determining the ability of the test compound to modulate binding of CC potential ligand and/or modulators of GPCR and a GPCR ligand. The method is used for identifying CC potential ligands and/or modulators of GPCRs, particularly modulators, CC for use as human therapeutics. Modulators of GPCR particularly modulators, CC for use as human therapeutics. Modulators of GPCR any be used for treating patients having e.g. retinitis pigmentosa, stationary night CD bindness, colour bindness, nephrogenic DI, isolated glucocorticoid deficiency, hyperfunctioning thyroid adenomes, familial hypocalciuric CC hypercalcemia, hyperparathyroidism and neurological disorders. The methods may be used in screening assays for CC small molecule library of compounds) or a composition containing a CC small molecule library of compounds) or a composition containing a CC identification of natural and surrogate agonists of orphan GPCRs, and for identification of GPCR antagonists and/or agonists
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Arrestin; phosphorylation-independent arrestin mutant; grotein-coupled receptor; GPCR; GPCR ligand; retinitis pigmentosa; stationary night blindness; colour blindness; nephrogenic DI; isolated glucocorticoid deficiency; hyperfunctioning thyroid adenoma familial hypocalciuric hypercalcemia; hyperparathyroidism;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   10-DEC-2001

Comprising the vector, a method for identifying a nucleotide a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a CC kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal CC subjected to pain, a method for identifying an agent CC expressed in an animal subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially CC expressed in an animal subjected to pain, a method for identifying a CC compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a CC method for identifying a compound or small molecula that regulates the CC specification, a method for identifying a compound useful in treating CC pain and a pharmaceutical composition comprising the one or more CC polypeptides or their antibodies. The polypucleotide given in the computates its activity is useful for preparing a medicament for treating CC pain (e.g. spinal segmental nerve injury (Chung), chronic constriction conjury (CCI) and spared nerve injury (SNI) in an animal (e.g. gene therapy). The sequence presented is a human protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           អ្នក អ្នក
CC or human polynucleotides or a polynucleotide which represents a fragment, CC derivative or allelic variation of the nucleic acid sequence. Also CC claimed are a vector comprising the nucleic acid sequence. Also CC claimed are a vector comprising the novel polynucleotide, a host cell CC comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a CC kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence CC that is differentially expressed in neuronal tissue of a first animal CC subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially CC expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the CC method for identifying a compound that regulates the activity in an animal of one or more of the polynucleotides, a method for identifying a compound useful in treating compound a pharmaceutical composition comprising the one or more of the polynucleotides or their antibodies. The polynucleotide or the compound that regulates the cc pain and a pharmaceutical composition comprising the one or more
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches

                         This invention relates to a method of differentially modulating the growth or differentiation of blood endothelial cells (BEC) or lymphatic endothelial cells (LEC) comprises contacting endothelial cells with a composition comprising an agent that differentially modulates blood or lymphatic endothelial cells. Treating hereditary lymphoedema comprises identifying a human subject with lymphoedema and with a mutation in at least one allele of a gene encoding a LEC protein, where the mutation correlates with lymphoedema in human subjects, and with the proviso that the LEC protein is not VEGFR-J; and administering to the subject a composition comprising a lymphatic growth agent selected from VEGF-C or VEGF-D polypeptides and polynucleotides. The invention may be useful for the development of compounds with an antiangiogenic, cytostatic, vasotropic or antiinflammatory activity or for gene therapy. The method is useful in modulating the growth or differentiation of blood endothelial cells or lymphatic endothelial cells, in treating hereditary lymphoedema, in screening for an endothelial cell disorder or travicity or for gene therapy or travicity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Best Loc

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               growth; differentiation; blood endothelial cell; BEC; lymphatic endothelial cell; LEC; hereditary lymphoedema; VEGFR-3; lymphatic growth agent; VEGF-U; VEGF-D; antiangiogenic; cytostatic; vasotropic; antiinflammatory; gene therapy; endothelial cell disord
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             01-JUL-2004
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 409 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene therapy). The sequence presented is a human protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            07-MAR-2002; 2002US-0363019P.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    07-MAR-2003; 2003WO-US006900
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     02-OCT-2003
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Homo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human BEC/LEC-related

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 of a drug on endothelial cells. The agent is useful in manufacturing a medicament for the differential modulation of blood vessel endothelial cell or lymphatic vessel endothelial cell growth or differentiation. The lymphatic growth agent may also be used in manufacturing a medicament for the treatment of hereditary lymphoedema resulting from a mutation in a LBC gene or of other diseases involving the lymphatic vessels, such as various inflammatory diseases and cancer metastasis via the lymphatic system. The present sequence is that of a human LBC/BBC differentially expressed protein which is related to the method of the invention.Note: This sequence does not appear in the specification but was obtained by the conference of the control of the invention of the conference of the control of the control of the conference of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence
                                                                polypeptide. The polypeptide, agonist or an antagonist, composition, and method are useful for diagnosing and treated disorder, e.g. systemic lupus erythematosus, rhe arthritis. The present sequence represents a DNA encoding
                                                                                                                                                                                                                                                        New nucleic acid encoding PRO polypeptide, useful for diagnosing and treating an immune related disorder, e.g. systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, thyroiditis, or diabetes mellitus

transformed with two vectors, where the first vector comprises a polynucleotide encoding a first hybrid polypeptide and DNA binding domain and the second vector comprising a polynucleotide encoding a second hybrid polypeptide and an activating domain that activates the toxic reporter gene, when the first and second hybrid polypeptides interact and selecting the modulating compound which inhibits the growth of the recombinant host cell (i.e. using the yeast two-hybrid system). The complexes are useful for identifying compounds that modulate the protein-protein interactions and useful for treating obesity and metabolic disorders e.g. non-insulin dependent diabetes mellitus, NIDDM. The compound isolated by the method is useful for treating and preventing obesity or metabolic diseases. The interactions between the proteins of the complex further define a set of selected interacting company to the proteins of the present sequence represents a member of the protein complex of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Rat; yeast two-hybrid assay; adipocyte; bait protein; NIDDM; non-insulin diabetes mellitus; obesity; selected interacting domain; SID; protein-protein interaction map; PIM; anorectic; metabolic disorder.

or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also C claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expressed in an animal subjected to pain, a method for identifying a compound which regulates the expressed in an animal subjected to pain, a method for identifying a compound which regulates the expressed in an animal subjected to pain, a method for identifying a compound that regulates the citivity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a compound that regulates the citivity in an animal of one or more of the polypeptides given in the composition and a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polynucleotide or the compound that regulates the citivity is useful for preparing a medicament for treating pain and a pharmaceutical nerve injury (Snup), chronic constriction injury (CCI) and spared nerve injury (Snup), in an animal (e.g. gene therapy). The sequence presented is a rat protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note:

The sequence data for this patent did not form directly from WIPO at the specification but was obtained in electronic form directly from WIPO at CC fromito.infrub/bublished not arminences.

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
